Mikado Sticks

41 pick - up sticks game

Mikado Sticks
A truly ancient game

First, stand the sticks upright holding them all vertically with your hand. Let go gently and allow them to drop where they may - jumbled up - Each player's goal is to pick up as many sticks without making the other sticks move.

The black stick in the bunch is worth the most points, any player who picks up can use the black stick as a "tool" to assist in removing the other sticks.

The round goes clockwise between all the players. Now one stick after another should be taken up without moving other. On a fault (any stick moves when player attempts to pick another) the turn ends & that stick is not counted. In that case, the player sums up his points & becomes spectator.

After several rounds the one with highest score is the winner.

Stick Colour	Points	Sticks
Black	80	1
Blue	40	8
Red	30	8
Yellow	20	12
Green	10	12
Total sticks		41

Dots & Boxes

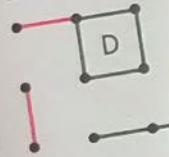

Two Player Game

The two players take turns to join two adjacent dots with a horizontal or vertical line. If a player completes the fourth side of a box, a point is scored and a mark that identifies the player is placed in the box.

The game ends when no more moves can be made. The winner of the game is the player with the most points.

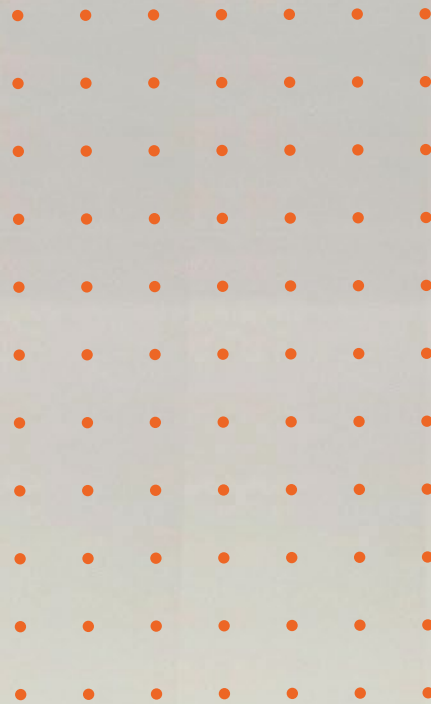

The only strategy is to avoid completing a box which makes it easy for the opponent to complete it.
